

ABSTRACT.

5 The present invention relates to an intake manifold or distributor for an air feed
circuit for an internal-combustion engine comprising, on the one hand, an intake
or plenum chamber of elongate shape and provided at one of its longitudinal ends
with an intake aperture and, on the other hand, at least two pipes laterally
10 connected to said chamber, said pipes extending at least partially around said
intake chamber from their inlet apertures opening therein and having a curved
structure over at least a portion of their length.

Manifold characterised in that it consists of two parts (6 and 7) produced by
injection moulding of thermoplastic material and joined together in the region of
15 peripheral joint zones located on a joining surface (8') crossing said manifold (1).
